

MoSCoW Prioritization Matrix

MoSCoW Prioritization Matrix	
Priority	Criteria
Must Have	Essential for the project, no workarounds, high impact
Should Have	Important but not critical, some workarounds possible
Could Have	Desirable but not essential, low impact
Won't Have	Not in the current scope, low priority

Requirement	Priority	Reason
Online patient registration	Must Have	Needed for the core system to work
Appointment booking	Must Have	Main feature for patients to schedule visits
Doctor schedule management	Must Have	Required to avoid conflicts and manage availability
Patient login and profile access	Must Have	Needed for secure system access
Appointment confirmation and reminder notifications	Must Have	Helps reduce missed appointments
Patient record management	Must Have	Core hospital workflow depends on it
Reception dashboard	Should Have	Improves front desk efficiency
Doctor dashboard	Should Have	Helps doctors view appointments easily
Search patient by name, ID, or mobile number	Should Have	Makes records easier to find
Reports and basic analytics	Should Have	Useful for management review
Role-based access control	Should Have	Improves security and user access control
Appointment rescheduling and cancellation	Could Have	Useful, but not essential for first release
SMS and email customization	Could Have	Nice improvement for communication
Audit log of user activities	Could Have	Helpful for tracking changes
Mobile app version	Won't Have (for now)	Out of scope for the first release
Online payment integration	Won't Have (for now)	Can be added in a future phase
Telemedicine module	Won't Have (for now)	Not part of the initial project scope

RTM

Business Goal	Requirement ID	Functional Requirement	Test Case ID	Status
Reduce manual patient registration	FR-001	The system shall allow new patients to register using basic personal and contact details.	TC-001	Traced
Enable secure access for patients	FR-002	The system shall allow registered patients to log in securely.	TC-002	Traced
Simplify appointment booking	FR-003	The system shall allow patients to book appointments based on doctor availability.	TC-003	Traced
Allow appointment changes	FR-004	The system shall allow patients to reschedule or cancel appointments before the scheduled time.	TC-004	Traced
Improve doctor schedule management	FR-005	The system shall allow administrators to create and update doctor schedules.	TC-005	Traced
Maintain centralized patient records	FR-006	The system shall store patient visit history in a centralized electronic record.	TC-006	Traced
Reduce missed appointments	FR-007	The system shall send appointment confirmation and reminder notifications via SMS or email.	TC-007	Traced
Support front desk operations	FR-008	The system shall allow receptionists to search, register, and manage patient appointments.	TC-008	Traced
Provide management visibility	FR-011	The system shall generate basic reports on appointments, patients, and doctor activity.	TC-009	Traced
