

User Acceptance Texting

UAT Objective

To verify that the Smart Hospital Appointment & Patient Management System meets the agreed business requirements and is ready for deployment.

UAT Scope

The following modules will be validated:

- Patient Registration
- Appointment Booking
- Doctor Schedule Management
- Patient Records
- Reception Dashboard
- Reports & Analytics

UAT Participants

Role	Responsibility
Business Analyst	Prepare UAT plan, coordinate testing, record defects, and collect sign-off
Hospital Administrator	Approve business functionality and provide final sign-off
Receptionist	Test patient registration and appointment booking process
Doctor	Test appointment schedule and patient record access
QA Team	Support testing and resolve reported issues with developers

UAT Entry Criteria

- Functional testing completed successfully.
- Critical defects resolved.
- UAT environment is ready with sample hospital data.

UAT Exit Criteria

- All critical test cases pass.
- Business users approve the system.
- Project Sponsor provides final approval for deployment.

UAT Deliverables

- UAT Test Cases
- Defect Log
- UAT Sign-off Document

UAT Test Scripts & Test Cases

User Acceptance Testing (UAT) is the final stage of testing before the application is deployed to end users. Its primary purpose is to ensure that the system satisfies the agreed business requirements and supports day-to-day hospital operations. For this project, UAT would be conducted by business users such as receptionists, doctors, and the hospital administrator using predefined test scenarios prepared by the Business Analyst. These scenarios would cover key functionalities including patient registration, appointment booking, doctor schedule management, patient record access, and report generation. During testing, users would perform real-world tasks and verify whether the system behaves as expected. Any issues identified would be documented and shared with the development team for resolution. Once all critical test cases are successfully completed and stakeholders confirm that the system meets business expectations, the Hospital Appointment & Patient Management System would receive formal business approval and be considered ready for deployment.
