Project name:	Smart Hospital Appointment & Patient Management System
Project manager:	M.Ganeswara Reddy
Date submitted:	july 2026
Document status:	☒ Draft ☐ Proposed ☐ Validated ☐ Approved

1. Executive summary

CarePlus Hospitals Pvt. Ltd. currently manages outpatient appointments, patient registration, and doctor scheduling through manual processes involving paper records, Excel spreadsheets, and disconnected software systems. These practices result in long waiting times, appointment conflicts, duplicate patient records, and inefficient hospital operations.

To address these challenges, the hospital proposes implementing a centralized web-based Hospital Appointment & Patient Management System. The new solution will streamline appointment scheduling, digital patient registration, doctor scheduling, and reporting while improving operational efficiency and patient satisfaction.

2. Project objectives

- 1.Digitize patient registration and appointment booking.
- 2.Reduce patient waiting time by at least 30%.
- 3.Eliminate appointment scheduling conflicts.
- 4.Centralize patient information in a single system.
- 5.Improve doctor schedule management.
- 6.Automate operational reporting.
- 7.Enhance patient satisfaction through faster service.
- 8.Support data-driven decision-making using dashboards.

3. Project scope

- In Scope
- 1.Patient Registration
 - 2.Appointment Booking
 - 3.Doctor Scheduling
 - 4.Electronic Patient Records
 - 5.Reception Dashboard
 - 6.Doctor Dashboard
 - 7.Admin Dashboard
 - 8.Reporting & Analytics
 - 9.Role-Based User Access

4. Business requirements

Priority level	Critical level	Requirement description
Critical		The system shall allow patients to register online.
Critical		The system shall allow patients to book appointments with a
Critical		The system shall prevent double-booking of appointment slot
High		The system shall maintain centralized electronic patient records
High		Doctors shall be able to view their appointment schedules

5. Key stakeholders

Name	Job role	Duties
Hospital Administrator	Business Owner	Defines business requirements and validates processes
Business Analyst	Requirement Analyst	Gathers, analyzes, and documents business requirements
Development Team	Software Developers	Develops the application
Doctors	End Users	Manage appointments and patient consultations
Patients	External Users	Book appointments and access services

6. Project constraints

Constraint	Description
Budget	Project budget should not exceed ₹40 Lakhs.
Timeline	Solution must be delivered within 17 weeks.
Data Security	Patient information must be protected and accessible only to authorized users.
User Adoption	Hospital staff should be trained before deployment.
System Availability	The application should remain available during hospital working hours with minimal downtime.

7. Cost-benefit analysis

Cost	Benefit
Software Development – ₹18,00,000	Reduced manual administrative work, saving approximately ₹8,00,000 per year
Hardware & Infrastructure – ₹6,00,000	Faster appointment booking and reduced patient waiting time
Deployment & Implementation – ₹4,00,000	Centralized patient records and improved data accuracy
First-Year Maintenance & Support – ₹5,00,000	Better patient satisfaction, improved decision-making through real-time dashboards
Total cost: 35–40 Lakhs	Expected ROI: 20,00,000 per year
